### **When Sliding is like Floating**

#### **Optimal transfer mattress for patient stretchers STS und STL**

*Wickede/Duesseldorf, November 2009* The transfer mattress by Schmitz u. Soehne with its high sliding quality means less work for medical staff and greater convenience for patients. The company has developed the transfer mattress particularly for its patient stretcher models STS and STL. The mattress may be attached safely on the stretcher and facilitates the transfer of patients. Even a single staff member can transfer the patient alone, because the mattress' material is of high sliding quality. Thus both time and personnel costs can be saved. Relocation of patients up to 225 kg is possible. The upholstery is 80 mm thick and allows x-ray imaging. It might be used as standard upholstery so that it does not need to be purchased additionally.
